

Turnout

imada level · national rate 30.37%

The scale is fixed at 0–100%, so a shade means the same turnout here as on every other figure in this repository. The rule across the bar is the national rate, 30.37%: 845 units fall below it and 1122 above. The bracket beside the bar is the observed range, 5.4% to 84.1% — a third of the scale, which is why the map reads flat. 75 unit(s) are drawn grey because their turnout would rest on under 50% of their stations — see the coverage map beside this one.

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.
