- 0.3 – 1.0
- 1.0 – 3.3
- 3.3 – 6.4
- 6.4 – 10.4
- 10.4 – 18.2
- 18.2 and above
- no imada within 30 km

2024 Tunisian presidential election · each imada centroid is a sample, weighted by its certified valid votes.
The bandwidth is local: every sample is smoothed over its own nearest-neighbour distance (median 4.2 km, max 105 km), chosen by leave-one-out cross-validation.
Grey: the nearest place that voted is more than 30 km away, so no estimate is drawn. Boundaries: OCHA/HDX COD-AB (CC BY-IGO).
Class breaks are percentiles of the surface itself. A local kernel concentrates each imada's votes into roughly its own footprint, so the surface peaks near 6,945/km².
