

Kais Saied's first-round share, 15 September 2019: what a model can and cannot recover

Forward-selected OLS, three variables, the selection redone inside every fold. Candidate predictors: the 2014 presidential and legislative results, 2014 participation, geography, the 2014 census, and 29 per-head statistical-yearbook indicators -- all resolved to the constituency, including the halves of Tunis, Sfax and Nabeul, whose split was recovered from the archive's own folder tree. Every number is out of sample. Sources: ISIE 2019 retrospective report annex 7, JORT 2014, INS RGPH 2014 via MedDhia/rgph2014tn, INS Annuaire Statistique via MedDhia/ConsumptionSurveysTN, OCHA/HDX COD-AB boundaries.
