

Saied's margin over his strongest rival

kernel-smoothed surface · vote-weighted
local bandwidth · nearest neighbour

2024 Tunisian presidential election · each imada centroid is a sample, weighted by its certified valid votes.
The bandwidth is local: every sample is smoothed over its own nearest-neighbour distance (median 4.2 km, max 105 km), chosen by leave-one-out cross-validation.
Grey: the nearest place that voted is more than 30 km away, so no estimate is drawn. Boundaries: OCHA/HDX COD-AB (CC BY-IGO).
The scale is the fixed one every share figure here uses — 0-100% for a share, -100 to +100 points for the margin — so a shade means the same value as on the choropleths; the bracket on the bar gives the range this surface reaches, and maps/fitted/margin_kde.* is the same surface with the ramp fitted to it.
