

Twelve family names that sit in few places

the most spatially concentrated names in the register ($\geq 3,000$ voters), by Herfindahl index over imadas — concentration is where a name is registered now, not evidence that its holders never moved

Every panel on one scale: 1 dot = 2 voters, so a panel with more dots holds more voters. Dots fall at random inside the imada that holds them.
Counts: ISIE preliminary voter register, 6 July 2024. Boundaries: OCHA COD-AB admin4.
