

Turnout, weighted by electorate

Dorling cartogram · circle area is registered voters · 259 delegations

Circle area is the registered electorate on the turnout basis, so the ink is proportional to the people whose participation is being measured -- unlike the choropleth, where the ten largest delegations cover 40.6% of the map. Positions are approximate: circles are nudged apart until none overlap, a median 0.2% of the map diagonal from where they belong.

Colour is the same scale as the turnout choropleth, breaking on the national rate of 30.38%. Delegations below the coverage floor are absent entirely rather than drawn at zero.

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.
