

The candidate-representatives block, and what the presence cut responds to

bureau 21150410101 - the block in place, all three rows written

اسماء واعضاء المكتب القدر الثاني		
الإسماء	الترشح	اسم وقتب ممثل الترشح
	حنان سويد	حنان كحار
	أمين سويد	أمين سوسسي
	فاتن سويد	فاتن سوسسي

bureau 21150410101 - written; score 0.0716 $\geq$ the cut 0.0101

حنان كحار	حنان سويد
-----------	-----------

bureau 02010110204 - empty; score 0.0000 $<$ the cut 0.0101

--	--

Read by tools/read_representatives.py. The block sits at template $y=942-1077$, below every cell in the locator's field map (which stops at $y=874$), which is why no column in data/pv_presidential_2024.csv records it. Presence only: the field does not read which candidate a row names. The score is the smaller of the two cells' thick-column fractions.
