

Turnout coverage

share of each unit's stations carrying both figures · imada level

2042 mapped units

Turnout is computed only over stations where both the registered and the voters figure survived the read and the registered figure passed its gate. This map is how much of each unit that is — the palest class is the 75 unit(s) withheld from the turnout map entirely.

The gaps are not random: the forms that fail are the low-resolution scans, so a unit with poor coverage is also a unit whose surviving stations may not represent it. Read the turnout map against this one.
