

Turnout

delegation level · national rate 30.38% · scale fitted to this map (31% of the full range)

SCALE FITTED TO THIS MAP: the ramp spans 13.8% to 44.8%, not 0 to 100, which is about 3.2 times the contrast of the fixed-scale version — and the reason the geography is legible here and flat there. The price is that a shade means nothing on any other figure. The strip beside the bar shows the window; the rule is still the national rate, 30.38%, with 105 units below it and 154 above.

For a shade that means one number everywhere, use `maps/turnout/turnout_delegation.*`

5 unit(s) are drawn grey because their turnout would rest on under 50% of their stations.

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.
