

Bizerte governorate · against each candidate's own average

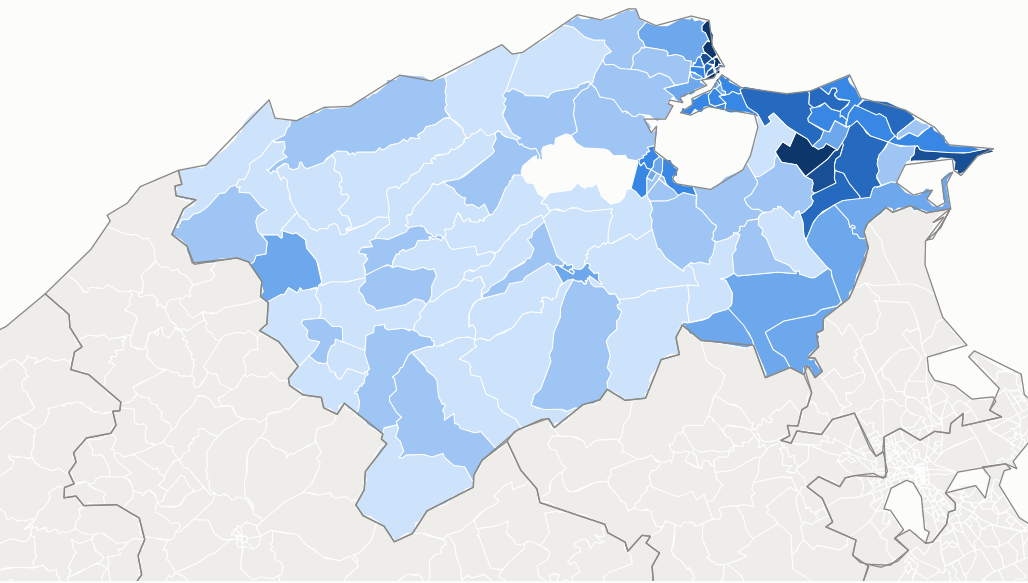

local share ÷ this candidate's national share — one scale for all three panels

under 0.25× 0.25 – 0.5× 0.5 – 0.71× 0.71 – 1.00× 1.00 – 1.41× 1.41 – 2.0× over 2.0× no result

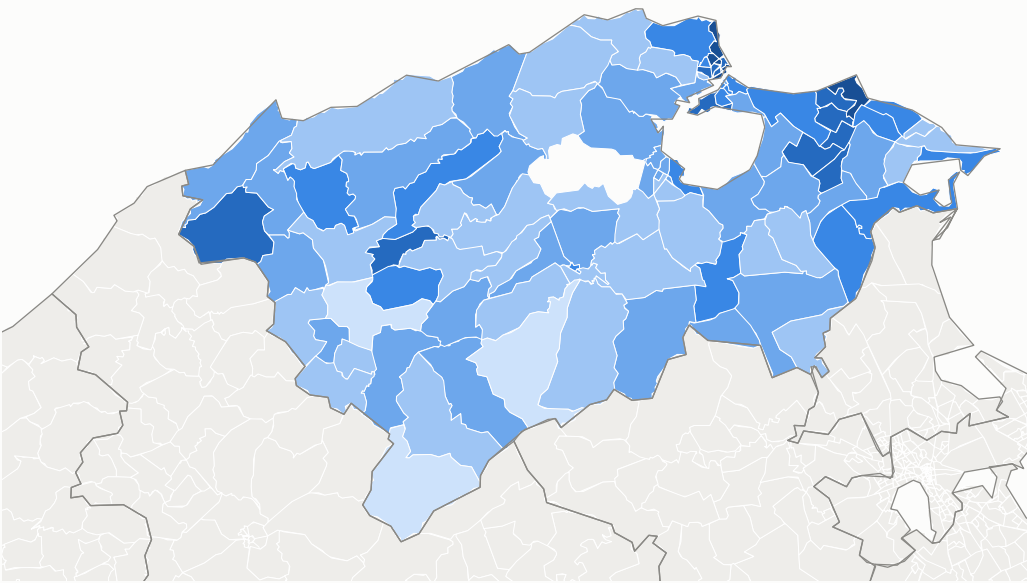

Kais Saied
102 imadas · 0.80–1.09× here · national 91.12%

Ayachi Zammel
102 imadas · 0.06–3.34× here · national 6.98%

Zouhair Maghzaoui
102 imadas · 0.22–2.96× here · national 1.89%

A different question from the shares sheets, not a different scale for the same one. There, a shade is a share on the fixed 0–100% bar, comparable everywhere; here it is a multiple of that candidate's OWN national share, with the boundary at 1.00× being that average — so this is the basis that says whether a unit was good or bad FOR THIS CANDIDATE, which no scale of shares can. A multiple is not a percentage, so it keeps classed breaks at half-powers of two. Saied is nearly flat here for a reason that is the finding rather than a defect: he cannot exceed 1.10×, because at a 91.12% national share a unit giving him 100% is only 1.10 times it. Neighbouring imadas are drawn in light grey for orientation and carry no value. 2024 Tunisian presidential election · shares of valid votes at certified stations · imada level · boundaries OCHA/HDX COD-AB (CC BY-IGO)
