

The largest local family name in each governorate

the same register read over its 425 concentrated names only — those with at least 1,000 holders and a Herfindahl index over imadas of 0.05 or more, which is what makes a name local rather than national

Leading is not dominating, least of all here: the leading name holds a median 0.48% of its governorate's electorate (quartiles 0.33% and 0.85%). A governorate pools every quarter and village inside it, each with its own largest name, so the winner is whichever name is common across all of them rather than dominant in any.

Every unit is named on its face rather than coloured: at 23 different names over 24 governorates, a legend of six or seven colours would leave most of the map grey with a leader the reader could not see. A label too big for its governorate, or pushed aside so two would not print through each other, carries a line back to the unit it names.

A name written with the definite article and without it is pooled as one name.
Counts: ISIE preliminary voter register, 6 July 2024, summed to the governorate through data/surname_imada_crosswalk.csv. Boundaries: OCHA COD-AB admin2.
