

Turnout

imada level · national rate 30.37%
scale fitted to this map (79% of the full range)

turnout (% of registered)

1967 mapped units

SCALE FITTED TO THIS MAP: the ramp spans 5.4% to 84.1%, not 0 to 100, which is about 1.3 times the contrast of the fixed-scale version — and the reason the geography is legible here and flat there. The price is that a shade means nothing on any other figure. The strip beside the bar shows the window; the rule is still the national rate, 30.37%, with 845 units below it and 1122 above.

For a shade that means one number everywhere, use `maps/turnout/turnout_imada.*`

75 unit(s) are drawn grey because their turnout would rest on under 50% of their stations.

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.
