

The largest family name in each polling centre

2024 ISIE voter register (6 July 2024), the finest unit it publishes: 6,507 of 7,373 centres have a family name to lead, and 2,433 different names lead one. A patronymic is a father's name and does not count; one would have led in 816.

- **Saleh** صالح
leads 131 centres · 1,482 voters there
- **Trabelsi** الطرابلسي
leads 130 centres · 12,592 voters there
- **Ayari** العياري
leads 128 centres · 9,638 voters there
- **Abidi** العبيدي
leads 97 centres · 13,020 voters there
- **Hammami** الهمامي
leads 75 centres · 8,315 voters there
- **Sghaier** الصغير
leads 64 centres · 1,036 voters there
- 5,882 centres led by one of the other 2,427 names
- × 866 centres where every voter carries a patronymic, so no family name leads them

Next after these, by centres led: Dridi (61), Riahi (55), Jlassi (55), Bjaoui (47), Mejri (45)

The imada's answer is not the centres'. 57% of centres are led by a name other than the one leading their imada, and 1,471 of the 1,609 imadas holding more than one centre are split.

Leading is worth least here: the leader holds a median 11.2% of a centre's electorate, and in 45% of centres is ahead by under ten voters — at 539 voters a centre, a few households.

Every pair of these 6 colours stays 16.1 CIEDE2000 apart under normal vision and all three dichromacies — every pair, not only the ones that meet: dots have no borders. 7 cannot clear it.

No ISIE file gives a polling centre a coordinate: each is drawn at an arbitrary point inside the imada that holds it, spread so one imada's centres do not stack — which centre sits where is not known. A name is pooled with its definite-article variant; one recorded as the bare article is a truncated record, not a name. ISIE preliminary voter register, 6 July 2024; boundaries OCHA COD-AB admin4.
