Shares of valid votes at certified stations. EACH PANEL HAS ITS OWN SCALE, fitted to the values that panel contains — the range is under each title and the strip beside each bar shows the window against the full 0–100. So the panels show WHERE each candidate was strong, and the colours must NOT be read across them: Maghzaoui's darkest units are near 15% where Saied's are near 98%. Use maps/national/composite_imada.* to compare levels. Boundaries: OCHA/HDX COD-AB (CC BY-IGO).
