Saied's margin over his strongest rival
87 imadas · 80.9–100.0% here

THE SCALE IS FITTED TO THIS EXTENT: each panel's ramp spans only the values that panel contains — the range is under its title and the strip beside its bar shows the window against the full scale. So the whole ramp goes on the variation inside this extent, which is what makes local geography legible.
The price is double here: a shade means nothing on any other sheet, AND nothing across the four panels of this one, since each has its own scale. For a shade that means one number everywhere use maps/zoom/zoom_<extent>.*; for comparison across candidates at a candidate's own level use maps/zoom/zoom_ratio_<extent>.*
Neighbouring imadas are drawn in light grey for orientation and carry no value. 2024 Tunisian presidential election · shares of valid votes at certified stations · imada level
