

Turnout coverage

share of each unit's stations carrying both figures · imada level
scale fitted to this map (100% of the full range)

stations on the turnout basis (%)

2042 mapped units

SCALE FITTED TO THIS MAP: the ramp spans 0.0% to 100.0%. That is only 1.00 times the contrast of the fixed-scale version, because coverage is the one quantity in this directory that really does use its whole range — so this pair is near-identical by construction, and the strip beside the bar showing a nearly full window is the point. maps/turnout/coverage_imada.* is the comparable one.

Turnout is computed only over stations where both the registered and the voters figure survived the read and the registered figure passed its gate. This map is how much of each unit that is; the 75 unit(s) below the 50% floor ruled on the bar are withheld from the turnout map entirely.

The gaps are not random: the forms that fail are the low-resolution scans, so a unit with poor coverage is also a unit whose surviving stations may not represent it. Read the turnout map against this one.
