

Turnout by region

summed from the delegation table on the matched basis · national rate 30.38%
scale fitted to this map (9% of the full range)

SCALE FITTED TO THIS MAP: the ramp spans 22.6% to 31.3%, about 11 times the contrast of the fixed-scale version — aggregating to 6 units leaves turnout in a narrow band, so the fixed one is nearly uniform. A shade here means nothing on any other figure; maps/turnout/turnout_region:* is the comparable one.

Centre East 31.3% · North East 31.2% · North West 30.8% · Centre West 30.7% · South West 29.5% · South East 22.6%

Rollled up from the delegation table by summing the matched numerator and denominator, not by averaging the level below: a 3,000-voter delegation must not weigh the same as a 60,000-voter one. Range 22.6% to 31.3%. The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.
