

Turnout — Ben Arous governorate

THE SCALE IS FITTED TO THIS EXTENT: each panel's ramp spans only the values it contains, so the whole of it goes on the variation inside this extent. The strip beside each bar shows the window against the full 0-100, and each bar still carries the rate or floor it is read against.

The price is double: a shade means nothing on another sheet, AND nothing across the two panels here, since turnout and coverage now have different scales. For comparable shades use `maps/turnout/zoom_turnout_<extent>.*`

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.

Neighbouring imadas are drawn in light grey for orientation and carry no value. Source: ISIE procès-verbaux · boundaries OCHA/HDX COD-AB (CC BY-IGO) · turnout is voters over registered, on the stations where both figures survived the read
