

Turnout — Ben Arous governorate

One extent at full page size, on the same fixed 0-100% scale as every other figure here; the bracket on the bar and the subtitle both give this extent's own range.

This map previously classed on the extent's own quantiles, spending the whole ramp on local variation at the price of meaning nothing outside the map. With the scale fixed it no longer does, so what it adds over the turnout panel of `zoom_turnout_*` is size. For the detail — the whole ramp spent on this extent — use `maps/fitted/micro_turnout_<extent>.*`

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.

Neighbouring imadas are drawn in light grey for orientation and carry no value. Source: ISIE procès-verbaux · boundaries OCHA/HDX COD-AB (CC BY-IGO) · turnout is voters over registered, on the stations where both figures survived the read
