

Turnout — Tunis governorate

Class breaks are the national imada quantiles, anchored on the national turnout rate, so a shade means the same thing on every sheet and against the national maps. The coverage panel is the same extent's evidence: pale is a unit whose turnout rests on few of its stations, and units under the floor carry no turnout at all.

The registered count is the only field in this dataset that no identity on the form checks — the one field read by classifier alone — so turnout is a certified numerator over an uncertified denominator, and is weaker evidence than any candidate figure mapped elsewhere in this directory.

Neighbouring imadas are drawn in light grey for orientation and carry no value. Source: ISIE procès-verbaux · boundaries OCHA/HDX COD-AB (CC BY-IGO) · turnout is voters over registered, on the stations where both figures survived the read
